

Leveraging 20+ Years of Must-Work Control Solutions

DNF has more than 20 years of experience providing "must work," mission-critical control systems for broadcast and production operations.

DNF Controls' core competencies:

- Extensive knowledge, understanding, and use of equipment control protocols for television broadcast, television production, live and sports production, industrial video, military, and professional corporate uses
- Extensive knowledge and understanding of human interaction with equipment and technology to provide fast, easy, reliable, and repeatable control and workflow
- Providing control integration solutions — technology, hardware, and software — that enable a wide range of equipment from different manufacturers with dissimilar control protocols to co-exist successfully in an integrated system under human and machine control

Clip Payout Control System

Powerful Control Over Live Television . . . at Your Fingertips

Flex Control Network's Clip Payout Control System provides fast, simple, and reliable control assembling a list of clips and then playing them out.

Assemble List

Using the Clip Payout Windows app, you can view the list of available clips on all video server channels being controlled. Filter the list with a keyword or partial clip name to quickly find content. Drag and drop a clip into the playout channel's list. Drag one clip or drag multiple clips. Drop clips into any of the controlled playout channels. Insert clips. Append clips. Delete clips. Move clips. Build and save individual channel lists for future playout. Recall saved channel list when required for air.

Play Out List

Double click on a clip name to load and cue the clip. Click on Play to play it out. Clip will play to its end frame and then stop. Or, click on Stop to pause playout. Then, click on Play to restart playout.

Playout clips in any order. Simply double click to load and cue the next clip. Make on-the-fly changes to the list- add, insert, or delete clips.

Flexible Control

Flex Control Network® is DNF's modular platform of professional IP-based machine controllers. The Clip Payout Windows app works in conjunction with Flex's DC20 Device Controller to control playout on any VTR, DDR, or video server connected to the DC20. The Clip Payout app connects to the DC20 over Ethernet -LAN, WAN, or Internet- providing control wherever the DC20 is located.

Robust Control

The IP-based Flex Control Network is engineered from the ground up to deliver a network-grade infrastructure that reliably and accurately controls connected devices in the same room, across campus, and around the globe. More than a mere controller, the Flex Control Network embodies a distinctively robust and dynamic infrastructure to elevate your system designs to higher levels of performance and reliability. Flex Control Network provides reliable connectivity and accurate control over your devices, throughout your facility, and around the world.
