

# Sports Control - When Every Second Counts

**DNF Controls'** sports controllers provide the tools to help you create exciting visuals. Designed for the chaotic and fast-paced environment of sports broadcasting, our familiar and intuitive interfaces let you quickly mark IN and OUT points, assemble highlight lists, and perform instant replays so you can stay on top of the game.

## Sports Control Workflow Options

### Option #1 — Simple Slow Motion Instant Replay

For applications that require basic slow motion instant replay, pair a VTR/DDR with the ST300 slow motion controller, which can control one to four VTRs or DDRs individually or ganged together. Simply press one button on the controller to record the game action, and then press another button to save the time of noteworthy events as cue points. You can stop recording, go to a saved cue point, and play it back at normal or slomo speed. One more button-press will resume the recording.

### Option #2 — Advanced Slow Motion Instant Replay

For more demanding applications, bundle the Sony DSR-DR1000 DDR with **DNF Controls'** ST304-DSR1K slow motion controller, OR match up DNF's ST304-SRP slow motion controller with a DDR or video server that supports simultaneous record and playback. With these solutions, you can control up to four independent channels, two for recording and two for playback.

Don't miss any action — simply place the DDR into record for the duration of the game. While you're recording, mark IN and OUT points to create video segments and save them as cue points. Then you can go to a saved cue point and play it out at normal or slomo speed.

### Option #3 — Advanced Instant Replay with Highlight Lists

Achieve even more power by combining the DMAT Sports Controller with a multi-channel DDR or video server that supports simultaneous record and playback. With control of up to four record and four playback channels, you can create cue points from multiple cameras to provide different angles of the same event, and create playlists of cue points, all with only a few key strokes. To create an exciting visual sequence, play out a sequence of cue points, one seamlessly following the other.

# Everything's Under Control!

**ST300 Slow Motion Controller:** Acclaimed worldwide for its performance on demanding, fast action sports broadcasts. Provides fast, simple, precise control of four VTRs. Highly personalized control options provide operators the speed and simplicity for fast, accurate replays. Offers a detented wheel or T-bar for smooth slow motion.

**ST304 Slow Motion Controller:** The ST304-DSR1K-T, provides fast, easy, reliable and affordable VTR-like control of Sony's DSR-DR1000 DVCAM stream-based hard-disk recorder--create, save, and recall clips. T-bar for smooth slow motion control.

**DMAT-O Sports Controller:** Slow motion instant replay and highlight list creation and playback has never been easier. "Elvis-like" functionality allows you to quickly and easily mark, save, and recall clips with minimal keystrokes. Instantly build and play out highlight lists.

**DMAT-EZ Sports Controller:** Instant replays and highlight lists are simple, fast, and EZ! VTR-like functionality lets you quickly and easily mark and save cue points with minimal keystrokes. Create highlight lists of cues, then play them out. User-friendly display and control panel gives you the right tools for everyday sports broadcasts.
