

ST300-SSM & ST300-SSM-T

SIMPLE, PRECISE, RELIABLE SLOW MOTION INSTANT REPLAY

DNF's ST300 Series Slow Motion Controllers are acclaimed worldwide for performance on demanding, fast action sports broadcasts!

For cost effectiveness, ease of use and high performance, consider one of the industry's most popular instant replay controllers: the ST300-SSM! Paired with VCR's or DDR's, the ST300 controls one to four channels individually or ganged.

Simply press one button on the controller to record the action, then press another button to save the time of noteworthy events as cue points. Stop recording, go to a saved cue point, then play it back at normal or slo-mo speed. One more button-press resumes the recording.

ST300-SSM

- The small footprint of the ST300 fits virtually anywhere you need control: even on your lap!
- Save up to 100 cue points per channel; cue points are saved even when the power is off!
- The ST300-SSM features slo-mo, jog and shuttle using the detented wheel.
- Add a "T" Bar (ST300-SSM-T) to ensure the smoothest possible replay (0% - 200%) for demanding sports production.
- Exclusive menu options and highly personalized control features give operators the control they need for fast, accurate replays. The powerful setup menu includes:
 - Preset slo-mo speed range
 - Select automatic mark cue advance
 - Save last used slo-mo speed
 - Enable/disable freeze at record out
 - One- or two-button record
 - Set preroll duration from one frame to one hour.
- One keystroke marks a cue point; two keystrokes recall up to 100 cue points per channel
- Search to a cue point, a manually entered timecode number, or a record out point
- Manually enter and edit cue points.
- Freeze on last good video, with a user defined second freeze.

ST300-SSM-T

DNF's sports controllers provide the tools you need to create exciting visuals! Designed for the chaotic and fast-paced environment of sports broadcasting, the familiar, intuitive interface of the ST300 Series lets you stay on top of the game!

The ST300 Series is available with Sony control protocol.
